**Climate Change Education in Formal Settings, K-14** National Research Council 2012-11-02 Climate change is occurring, is very likely caused by human activities, and poses significant risks for a broad range of human and natural systems. Each additional ton of greenhouse gases emitted commits us to further change and greater risks.

In the judgment of the Committee on America's Climate Choices, the environmental, economic, and humanitarian risks of climate change indicate a pressing need for substantial action to limit the magnitude of climate change and to prepare to adapt to its impacts. A principal message from the recent National Research Council report, America's Climate Choices, this brief summary of how climate change will shape many aspects of life in the foreseeable future emphasizes the vital importance of preparation for these changes. The report points to the importance of formal and informal education in supporting the public's understanding of those challenges climate change will bring, and in preparing current and future generations to act to limit the magnitude of climate change and respond to those challenges. Recognizing both the urgency and the difficulty of climate change education, the National Research Council, with support from the National Science Foundation, formed the Climate Change Education Roundtable. The roundtable brings together federal agency representatives with diverse experts and practitioners in the physical and natural sciences, social sciences, learning sciences, environmental education, education policy, extension education and outreach, resource management, and public policy to engage in discussion and explore educational strategies for addressing climate change. Two workshops were held to survey the landscape of climate change education. The first explored the goals for climate change education for various target audiences. The second workshop, which is the focus of this summary, was held on August 31 and September 1, 2011, and focused on the teaching and learning of climate change and climate science in formal education settings, from kindergarten through the first two years of college (K-14). This workshop, based on an already articulated need to teach climate change education, provided a forum for discussion of the evidence from research and practice. The goal of this workshop was to raise and explore complex questions around climate change education, and to address the current status of climate change education in grade K-14 of the formal education system by facilitating discussion between expert researchers and practitioners in complementary fields, such as education policy, teacher professional development, learning and cognitive science, K-12 and higher education administration, instructional design, curriculum development, and climate science. Climate Change Education in Formal Settings, K-14: A Workshop Summary summarizes the two workshops.

**AP Environmental Science** Kevin Reel 2009-10 Are You Serious About Scoring a 5? Then Get REA's AP Environmental Science Test Prep with TestWare CD The #1 Choice for Serious Students! REA's AP Environmental Science test prep gives you everything you need to score a 5 on the exam! This second edition of our popular AP test prep is completely up-to-date and aligned with the official AP exam. The book contains in-depth reviews of all the topics covered on the AP Environmental Science exam, including: Matter & Energy in the Environment, Earth Systems, The Biosphere, Water & Land Resources, and Environment & Society. Case studies at the end of each chapter relate environmental topics and principles to real-world issues, so students can apply what they learn to everyday subjects. Diagrams, charts, and figures throughout the book illustrate key topics and data results. A glossary of terms all AP Environmental Science students should know and a breakdown of the exam's content are included so you can study smarter and score a 5!
