**The PLA at Home and Abroad** Roy Kamphausen 2010-01-01 "The chapters presented in this volume have demonstrated first, Chinese and PLA leaders have a strong sense of mission and concern for China's security and well-being. Second, the PLA is committed to the transformation in military affairs with Chinese characteristics. Third, the PLA is eager to learn from the U.S. military to expand and improve its operational capabilities. Finally, the PLA has made progress in its transformation and operational capabilities. For a long time, American leaders have been surprised with the PLA's advances. This volume (and many of the previous volumes from past PLA conferences) show that these advances did not come out of the blue. Although much of the learning and many of the improvements are still far from what is desired (from Chinese expectations and American critiques), and some of the learning has even created contradictions for the PLA, these persistent and diligent learning practices will eventually bring the PLA to a higher level of proficiency in its capabilities. The emergence of a much more sophisticated PLA in the coming years should not be a surprise."--P. 37-38.

**The Manager's Guide to Business Continuity Exercises** Jim Burtles, KLJ, MMLJ, Hon FBCI 2016-10-06 You designed your Business Continuity Plan to keep your business in business regardless of the forces of man and nature. But how do you know that the plan really works? Few companies can afford the recommended full-scale exercises several times a year. In The Manager's Guide to Business Continuity Exercises, Jim Burtles, an internationally known expert, details the options for conducting a range of tests and exercises to keep your plan effective and up to date. Your challenge is to maintain a good and effective plan in the face of changing circumstances and limited budgets. If your situation is like that in most companies, you really cannot depend on the results of last year's test or exercise of the plan. People tend to forget, lose confidence, lose interest, or even be replaced by other people who were not involved in your original planning. Jim Burtles explains: "You cannot have any real confidence in your plans and procedures until they have been fully tested...Exercises are the only way we can be sure that the people will be able to interpret the plans and procedures correctly within the requisite timeframe under difficult circumstances." As you do your job in this constantly shifting context, Jim Burtles helps you to: • Differentiate between an "exercise" and a "test" – and see the value of each in your BC program. • Understand the different types of plans and identify the people who need to be involved in exercises and tests for each. • Use the "Five-Stage Growth Path" – from desktop to walkthrough to full-scale exercise -- to conduct gradual testing, educate personnel, foster capability, and build confidence. • Create a variety of unusual scenario plot-lines that will keep up everyone's interest. • Identify the eight main elements in developing and delivering a successful BC exercise. • Select and prepare a "delivery team" and a "response team" for your exercise. • Make sure everyone understands the "rules of engagement." • Use the lessons learned from exercises and tests to audit, update, and maintain the plan. You are well aware that a host of problems may crop up in any kind of company-wide project. These problems can range from basic logistics like time and place, to non-support from executives and managers, to absenteeism, to the weather, to participants forgetting their lines. Throughout the book, Burtles uses his decades of experience working with companies like yours to give you useful examples, case studies, and down-to-earth advice to help you handle the unexpected and work toward the results you are looking for.

Risk-Based Maintenance for Electricity Network Organizations Ravish Preshant Yashraj Mehairjan 2016-12-24 This book focuses on the introduction of new and modern maintenance management frameworks of assets in the electricity & gas network sector and more specifically, on electricity networks for distribution. The author describes methodologies for developing and implementing maintenance maturity models, using case studies to show how these have been applied. These maturity models are discussed as part of an overarching, multi-disciplinary organizational maintenance management professionalization framework. This book adds a new dimension to the well-known Reliability Centered Maintenance (RCM) method, by incorporating failure modes via multiple scenarios into business values, by means of statistical risk calculation methods. The author demonstrates a method called Utility Risk Linked RCM, which uses a statistical tool to develop failure models which can be used to predict future failure behavior of assets in relation to corporate business values. This new method is a practical, structured and comprehensive framework for assessing risk based maintenance policies. The book also proposes a condition monitoring framework that can be used as a guide to assist asset managers in identifying the relationship between failure modes, ageing processes to select amongst condition monitoring regimes.
