A Guide to Global Mental Health Practice Craig L. Katz 2015-05-01 Drawing on the authors' experience in developing and implementing global mental health programs in crisis and development settings, A Guide to Global Mental Health Practice: Seeing the Unseen is designed for mental health, public health, and primary care professionals new to this emerging area. The guide is organized topically and divided into four sections that move from organizing and delivering global mental health services to clinical practice, and from various settings and populations likely to be encountered to special issues unique to global work. Case studies based around a central scene are threaded throughout the book to convey what global mental health work actually involves. Mental health professionals of all backgrounds, including social workers, nurses, nurse practitioners, psychologists, and psychiatrists, as well as public health professionals and community level medical professionals and mental health advocates will benefit from this engaging primer. It is the book for anyone committed to addressing mental health issues in a low resource or crisis-hit setting, whether international or domestic.

Visual Diagnosis and Treatment in Pediatrics Esther K. Chung 2012-03-28 Featuring over 500 full-color clinical photographs, succinct clinical pearls, and detailed differential diagnosis tables, this atlas is a visual guide to the rapid and accurate diagnosis and appropriate treatment of pediatric problems. The book will greatly assist busy practitioners in recognizing disease entities and distinguishing among entities that appear similar. The Second Edition includes information on treatment, a chapter on breastfeeding images that demonstrate proper latch, and 150 new images. Organized by anatomic site, the book focuses on presenting problems. Each chapter includes bulleted clinical pearls on the history and physical examination. A differential diagnosis table lists all common diagnoses with ICD-9 codes and the distinguishing characteristics for each diagnosis. Clinical photographs of each entity are then shown, including ethnic variations where relevant.

Pediatrics Morning Report Adler Salazar 2018-08-18 Pediatrics Morning Report: Beyond the Pearls is a case-based reference that covers the key material included on the USMLE Step 2 and Step 3, as well as the pediatric clerkship. Focusing on the practical information you need to know, it teaches how to analyze a clinical vignette in the style of a morning report conference, sharpening your clinical decision-making skills and helping you formulate an evidence-based approach to realistic patient scenarios. Each case has been carefully chosen and covers scenarios and questions frequently encountered on the Pediatrics boards, shelf exams, and clinical practice, integrating both basic science and clinical pearls. "Beyond the Pearls" tips and secrets (all evidence-based with references) provide deep coverage of core material. "Morning Report"/"Grand Rounds" format begins with the chief complaints to the labs, relevant images, and includes a "pearl" at the end of the case. Questions are placed throughout the case to mimic practical decision making both in the hospital and on the board exam. Written and edited by experienced teachers and clinicians; each case has been reviewed by board certified attending/practicing physicians.

Pediatric Anesthesia: A Problem-Based Learning Approach Kirk Lalwani 2018-10-15 Linking existing knowledge to new knowledge

by presenting it in the form of a case or a problem is a popular and effective educational approach resulting in better retention of the knowledge and improved ability to apply that knowledge to solve real problems. This problem-based learning (PBL) method was introduced into medical education at McMaster University in Ontario, Canada, in 1969. Since then it has been widely incorporated into secondary, undergraduate, and graduate education in a variety of disciplines worldwide. This new volume for the Anesthesiology Problem-Based Learning series reviews pediatric anesthesia utilizing the PBL approach. Each chapter deals with conditions and problems in pediatric anesthesia practice presented as a case stem with questions to encourage critical thinking, followed by an evidence-based discussion and multiple-choice questions for self-assessment. Cases were carefully selected to present a broad systems-based tour of commonly encountered clinical cases in pediatric anesthesia. The book can be used to review an upcoming clinical case or as a PBL tool. The "Stem Case and Key Questions" and "Discussion" sections can serve as the basis for interactive learning experiences for study groups or as a broad yet in-depth clinical review of the subspecialty for the individual learner. Self-assessment questions can be used as a measure of knowledge acquisition or simply as a question bank to prepare for examinations.

Comprehensive Neonatal Nursing Care Carole Kenner, PhD, NNP, FAAN 2013-08-21 "This book provides a complete look at neonatal healthcare delivery. This edition includes discussions of contemporary topics of interest, such as informatics, genetics, global health, and family-centered care, which are vital to providers caring for neonates today. The case studies and the evidence-based practice dialogues at the end of each chapter provide great opportunities for further reflection. The book is useful to a wide audience in nursing, including undergraduate and graduate nursing students, practicing neonatal and pediatric nurses, and advanced practice nurses who care for neonates." Score: 92, 4 Stars.--Doody's Medical Reviews This 'classic' has been thoroughly updated to incorporate the most up-to-date research findings and strategies for providing cost-effective and evidence-based care. New chapters address emerging infections, the late preterm infant, and neonatal care from a global perspective. Included are updated neonatal care protocols and procedures, neuroprotective risk factors, new treatments, and new trends in developmental care. Text integrates the Institute of Medicine's (IOM) five competencies, reflects the Affordable Healthcare Act and the Robert Wood Johnson and IOM report "The Future of Nursing." The text continues to provide neonatal care from a physiologic and pathophysiologic approach, with a major emphasis on nursing management at the bedside and advanced practice level. Each neonatal body system is presented, along with E-B interventions to assist in understanding the 'why' behind what is seen in the clinical area. Integrative management is threaded through the text along with extensive research findings to support practice strategies and rationales for sound clinical decision-making. Topics of recent interest include iatrogenic complications, neonatal pain, use of computers or other technology in neonatal care, and neonatal AIDS. Case studies enhance understanding of both common and rare neonatal conditions. New to the Fifth Edition: New chapters: emerging infections, the late preterm infant, and neonatal care from a global perspective Updated neonatal care protocols and procedures, neuroprotective factors, new treatment modalities and new trends in developmental care Tackles the UN Millennium Development Goals (MDGs) Addresses the expansion

of the nurse's role in the US and worldwide Provides case studies that lead the reader through the identification, diagnosis, treatment, and evaluation of common and rare neonatal conditions

TEXTBOOK OF ANIMAL BEHAVIOUR FATIK BARAN MANDAL 2012-01-17 This well-accepted book, now stands in its second edition, is a time-honoured revision and extension of the previous edition. Beginning with an introduction to the study of animal behaviour, the book explains the various aspects of behavioural biology incorporating a wealth of information from molecular biology, neurobiology, and socio-biology with a new approach. It describes different kinds of innate and learned behaviours, animal communications, defensive behaviours such as camouflage and mimicry with suitable illustrations. The book incorporates the introductory concepts of biomimicry in an attractive manner. Further, it discusses biorhythms, migration in fish and birds, in addition to evolution and physiological basis of migration. The text also presents the important aspects of socio-biology and social behaviours, such as feeding, adaptation, prey defence, territoriality, aggression, altruism, sexuality, and parental care. Finally, it provides discussions on behavioural ecology in the context of conservation biology, and human behaviour. The book presents the basic principles of animal behaviour with the aid of carefully selected examples from both the recent and classic literature along with an emphasis on readability. In the present edition, topics like eusociality and behavioural theories have been incorporated. This edition also includes as many as 11 published articles by the author on different topics related to the subject matter in box format to further strengthen the text. The book is primarily intended for the students of B.Sc./M.Sc. (Zoology/Life Science) for their courses. It would be useful for the researchers in the field of animal behaviour, and conservation biologists. It would also attract readership studying Sociology and Anthropology. KEY FEATURES : Presents a well-balanced view of ethology. Discusses the current development in the field. Includes a glossary of important terms. Offers end-of-chapter questions to check the students' understanding of the concepts.

Ethics and Research with Children Eric Kodish 2018-12-14 Fundamental questions about the morality of pediatric medical research persist despite years of debate and the establishment of strict codes of ethics. Is it ever permissible to use a child as a means to an end? How much authority should parents have over decisions about research involving their children? Should children or their parents be paid for participation in research? Most importantly, how can the twin goals of access to the benefits of clinical research and protection from research risk be reconciled? Promoting more thoughtful attention to the complex ethical problems that arise when research involves children, this fully updated new edition of Ethics and Research with Children presents 14 case studies featuring some of the most challenging and fascinating ethical dilemmas in pediatric research. Each chapter begins with a unique case vignette, followed by rich discussion and incisive ethical analysis. Chapters represent a host of current controversies and are contributed by leading scholars from a variety of disciplines that must grapple with how to best protect children from research risk while driving innovation in the fight against childhood diseases. Chapters end with questions for discussion, providing faculty and students with accessible starting points from which to explore more in depth the thorny issues that are raised. In the final chapter, the editors provide a synthesis and summary that serve as a capstone and companion to the case-based chapters. Unique in its specific focus on research, Ethics and Research with Children provides a balanced and thorough account of the enduring dilemmas that arise when children become research subjects, and will be essential reading for those involved with pediatric research in any context.

Imaging Anatomy of the Human Spine Scott E. Forseen, MD 2015-12-17 An Atlas for the 21st Century The most precise, cutting-edge images of normal spinal anatomy available today are the centerpiece of this spectacular atlas for clinicians, trainees, and students in the neurologically-based medical specialties. Truly an atlas for the 21st century, this comprehensive visual reference presents a detailed overview of spinal anatomy acquired through the use of multiple imaging modalities and advanced techniques that allow visualization of structures not possible with conventional MRI or CT. A series of unique full-color structural images derived from 3D models based on actual images in the book further enhances understanding of spinal anatomy and spatial relationships. Written by two neuroradiologists who are also prominent educators, the atlas begins with a brief introduction to the development, organization, and function of the human spine. What follows is more than 650 meticulously presented and labelled images acquired with the full complement of standard and advanced modalities currently used to visualize the human spine and adjacent

structures including x-ray, fluoroscopy, MRI, CT, CTA, MRA, digital subtraction angiography, and ultrasound of the neonatal spine. The vast array of data that these modes of imaging provide offer a wider window into the spine and allow the reader an unobstructed view of the anatomy presented to inform clinical decisions or enhance understanding of this complex region. Additionally, various anatomic structures can be viewed from modality to modality and from multiple planes. This state-of-the-art atlas elevates conventional anatomic spine topography to the cutting edge of technology. It will serve as an authoritative learning tool in the classroom, and as a crucial practical resource at the workstation or in the office or clinic. Key Features: Provides detailed views of anatomic structures within and around the human spine utilizing over 650 high quality images across a broad range of imaging modalities Contains several examples of the use of imaging anatomic landmarks in the performance of interventional spine procedures Contains extensively labeled images of all regions of the spine and adjacent areas that can be compared and contrasted across modalities Serves as an authoritative learning tool for students and trainees and practical reference for clinicians in multiple specialties

Emergency Medicine MCQs Waruna De Alwis 2012-10-09 An invaluable self-assessment tool for emergency medicine trainees in Australasia. Emergency Medicine MCQs is an essential resource for Australasia's emergency medicine trainees. A practical self-assessment tool, the book assists trainees as they expand and refine their knowledge of emergency medicine, and will ultimately help them pass the Australasian Emergency Medicine Fellowship examination (FACEM). The multiple-choice questions in

Emergency Medicine MCQs cover both the core and non-core areas in the Australasian Emergency Medicine Fellowship. Using this text, trainees can revise alone or with their peers to identify the areas in which they need further development. The curriculum is divided into three main areas where trainees require expert level of knowledge, high level of knowledge and general level of knowledge. It covers important clinical problems encountered in everyday emergency medicine practice – from cardiovascular emergencies through to obstetric and gynaecology emergencies, disaster management and toxicology. As well as being ideal for emergency medicine trainees qualifying through AECM, the book is a useful resource for GPs taking the GEM qualification through ACEM and JMOs 'on call'. Plus, this emergency medicine text is accompanied by an app – a separate product containing 180 randomised multiple-choice questions on all the topics within the book.
